

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-17 (cancelled).

Claim 18 (New): An organic electroluminescence device which comprises an organic layer disposed between at least one pair of electrodes, wherein the organic layer comprises a compound selected from compounds represented by the following general formula [3], [17] and [18]:

wherein X^1 to X^{14} each independently represents hydrogen atom, a linear, branched or cyclic alkyl group having 1 to 20 carbon atoms, a substituted or unsubstituted alkoxy group having 6 to 30 carbon groups, a substituted or unsubstituted aryl group having 6 to 30 carbon atoms, a substituted or unsubstituted aryloxy group having 6 to 30 carbon groups, a substituted or unsubstituted arylamino group having 6 to 30 carbon atoms, a substituted or unsubstituted alkylamino group having 1 to 30 carbon atoms, a substituted or unsubstituted arylalkylamino group having 7 to 30 carbon atoms or a substituted or unsubstituted alkenyl groups having 8 to 30 carbon atoms; a pair of adjacent groups represented by X^1 to X^{14} and a pair of adjacent substituents to groups represented by X^1 to X^{14} may form a cyclic structure in combination; when a pair of adjacent substituents are aryl groups, the pair of substituents may be a single group; and at least one of substituents represented by X^1 to X^i , i representing a number of 12 to 14, comprises an amine group or an alkenyl group; with the premise that the combination
